Observations

Research, generate and apply knowledge in the areas of life sciences and computational sciences, with the objective of offering data processing and storage services, software development, technical and scientific support to companies, public organizations, universities, research centers and groups in Colombia, supported by state-of-the-art technology.

Vision: By the year 2019 create the Bioinformatics and and Computational Center as a reference for Latin America in the generation, processing and application of knowledge for the benefit of companies, universities, research centers and groups, with high standards of quality and confidentiality.
